Textile Sorting and Recycling

Yarn

NewRetex Post-consumer Fibers

Our yarns are spun from post-consumer textiles, carefully sorted by fiber type and color. We work with accuracy and traceability at every step, from waste to yarn, to offer a clean, ready-to-use yarn with traceable roots.

For fashion, workwear, interiors - the future of textiles.

True Circularity

– New Life for Used Clothes

Why Choose NewRetex Yarns?

NewRetex yarns are thoughtfully crafted from a balanced blend of NewRetex post-consumer fibers, pre-consumer fibers, and virgin fibers — transforming discarded garments into high-quality yarns, giving them a second life.

All textiles are received and sorted locally in Denmark using our advanced, AI-powered technology, which ensures precise identification of material type, composition, and color. This guarantees clean, high-quality input for fiber production.

By choosing NewRetex, you help reduce the use of virgin fibers in textile production by keeping used textiles in the loop.

Want color options?

The base color of the yarn comes from the post-consumer fibers. By blending with pre-colored fibers, you can adjust the color shade without overdyeing.

Sorted for quality

Our sorting process is based on fiber composition and delivers a high level of accuracy. However, for post-consumer yarns, a variation of $\pm 3\%$ may occur. Due to the nature of recycled material, small traces of other fibers may still be visible. For us this is the charm of recycled textiles.

Traceability

At NewRetex, we manage our sorting operations using the **HUGIN Traceability System** - a proprietary Manufacturing Execution System that tracks material flow and machine performance in real time. The system enables precise control and full transparency across every stage of the sorting process. Combined with Global Recycled Standard (GRS), which verifies the recycled content of the fiber, we can assure full traceability from waste to final product, making it ready for European legislation on traceability as the CSDDD, CSRD and ESPR, which introduces, e.g. the Digital Product Passport. Providing the insight needed to make better and well-informed material choices.

Certification

NewRetex is certified with Global Recycled Standard (GRS) and Recycled Claim Standard (RCS).

NewRetex yarns carry a story.

Whether you're in fashion, workwear, or interiors, NewRetex yarns offer you a material choice rooted in circularity.

Circular benefits

Why We Do It

By utilizing resources from worn-out clothes in the production of our recycled fibers, we reduce the need for virgin materials and the intensive processes required to create them. We believe it makes perfect sense, and it gives a great feeling, to let old clothes live again.

By using our fibers in your production, you become an active part of the circular transformation.
